

SoftRider
Center loading Shoe
Small circle walking
Non yielding surface
Watch lateral breakover

Tight circle

Small circle

Inside front foot on surface

Inside front foot unweighting

Inside front foot rolling over laterally
Outside tendon fully loaded

Inside front foot about to make ground contact on non yielding surface

Inside front foot full ground contact

Inside front foot fully loaded

Inside front foot starting to unload and
breakover laterally

Front inside foot breaking over laterally
relieving inside tendon strain/stress

Inside front foot rolling over=less strain
As apposed to traditional peripheral loading shoe

Inside front foot

further lateral breakover

Rather than rotational torque in a tight circle

Lateral rollover less stress
Notice - non yielding surface

Inside front foot unloaded laterally

Inside foot starting forward swing phase
Hand walking in tight circle non-yielding surface

Forward Swing Phase

Inside front foot, walking in tight circle

Inside front foot, in forward swing phase
Tight Hand walking circle
Non yielding subsurface
